

Medical Grade Nootropic Powder Supplements CAS 34562-97-5 Raw Material Picamilon

Our Product Introduction

Basic Information

- Place of Origin: China
- Minimum Order Quantity: 10Grams
- Price: USD
- Packaging Details: 1kg/Foil Bag
- Delivery Time: 3-7days after received payment
- Payment Terms: T/T, Western Union, PayPal
- Supply Ability: 5000KG Per Year

Product Specification

- Product Name: Picamilon
- Cas: 34562-97-5
- Appearance: White Powder
- Purity: 99%
- Usage: Nootropic
- Highlight: **Medical Nootropic Powder Supplements, Nootropic Powder Supplements 34562-97-5, Raw Material Picamilon**

Product Description

Medical Grade Picamilon Raw Nootropic Powder CAS 34562-97-5

What is Picamilon

Picamilon (nicotinoyl-gamma-aminobutyric acid) is a synthetic substance that combines niacin (vitamin B3) with gamma-aminobutyric acid (a neurotransmitter with anti-anxiety effects).

Picamilon is considered a nootropic drug, an ill-defined group of drugs and supplements used in alternative medicine to enhance brain function.

Picamilon vs Phenibut

One common comparison amongst community members is picamilon vs phenibut. According to one comprehensive thread, a picamilon supplement can be used daily whereas phenibut cannot. It seems picamilon has less strong of an anxiolytic and GABAnergic response than phenibut.

For many people, this is a helpful difference. Phenibut is a potent sedative and mood lifter, which has garnered attention for withdrawal and tolerance effects. In fact, many people seek a phenibut high to get the greatest effects.

In contrast, picamilon is considered far safer for consumption on a regular basis. One member, by the name of "bose25" mentions using picamilon daily in the morning and evening to reduce symptoms of anxiety. While the effect is strong for one hour, the subtle reduced anxiety is still helpful for him in many situations.

Keep in mind, the picamilon vs phenibut debate includes much speculation and anecdotal evidence. We don't recommend basing your decisions on these reports alone.

Dosages for reference

The picamilon dosage most recommended online seems to be in the 100 – 200 mg per day range. Most of the scientific literature has no information for human picamilon supplement doses, but this seems to be the starting point for many users.

Because picamilon is lacking in research and particularly the data for human doses, it may be useful to follow a "Shulgin method" approach to the compound. This starts with a microdose (10 – 15 mg) of picamilon so as to determine allergies or adverse reactions.

After this, consume 50 – 100 mg dose and gauge the adverse reactions again before going to a full 200 mg picamilon dosage. Most of the data suggests you will be fine within this dose range.

Tell the doctor if you have any side effect that bothers you or that does not go away.

These are not all the possible side effects of this product. For more information, ask your doctor or pharmacist.
