

Raw Powder Drostanolone Enanthate CAS 13425-31-5 Masteron Enanthate For Muscle Gain

Our Product Introduction

for more products please visit us on bodybuild-supplement.com

Basic Information

- Place of Origin: China
- Minimum Order Quantity: 10Grams
- Price: USD
- Packaging Details: 1kg/Foil Bag
- Delivery Time: 3-7days after received payment
- Payment Terms: T/T, Western Union, PayPal
- Supply Ability: 5000KG Per Year

Product Specification

- Product Name: Drostanolone Enanthate
- Cas: 13425-31-5
- Appearance: White Powder
- Purity: 99%
- Usage: Muscle Gain
- Highlight: **Drostanolone Enanthate CAS 13425-31-5, Drostanolone Enanthate, Muscle Gain Masteron Enanthate**

Product Description

Raw Powder Drostanolone Enanthate CAS 13425-31-5 Masteron Enanthate For Muscle Gain

Details:

CAS No. :	13425-31-5
English Name :	Drostanolone Enanthate
English Alias :	(2 α ,5 α ,8 ξ ,9 ξ ,14 ξ ,17 β)-2-Methyl-3-oxoandrostan-17-yl-heptanoat
Density :	1.0 $\pm$ 0.1 g/cm ³
Boiling Point :	497.0 $\pm$ 45.0 °C at 760 mmHg
Melting Point(oC) :	N/A
Molecular Formular :	C ₂₇ H ₄₄ O ₃
Molecular Weight :	416.637
Flash Point:	209.4 $\pm$ 28.8 °C
Exact Mass :	416.329041
PSA:	N/A
LogP:	7.80
Vapor pressure:	0.0 $\pm$ 1.3 mmHg at 25°C
Refractive index:	1.516
HS Code :	N/A

What Is Masteron Enanthate and Why Is It So Popular?

Let us start with the basics of the Drostanolone molecule itself. Drostanolone is a Dihydrotestosterone (DHT) derivative, meaning it is a modified form of DHT itself. There are many anabolic within the family of DHT derivatives, some of which are very well known and very popular. DHT derivatives include: Anavar(Oxandrolone), Winstrol(Stanozolol), Primobolan (Methenolone), and various others. There is a good reason as to why DHT derivatives are very popular, very useful, and very effective compounds. Before expanding upon that, returning to Masteron (Drostanolone), Drostanolone differs from its parent hormone DHT by way of the addition of a 2-methyl group to its chemical structure. This makes Masteron significantly stronger in terms of anabolic effects compared to its parent hormone. However, although its anabolic properties are significantly greater when compared to its parent hormone, the anabolic properties when compared to most other anabolic are modest at best. Because of this, Masteron is normally utilized as a fat loss, cutting, and most commonly, a pre-contest agent for the competitive bodybuilder. Masteron also has its place with athletes in the department of speed sports due to its ability to increase lean mass without any water retention, and in fact reduces water weight.

Which brings us to the next important property of Masteron: it has demonstrated capabilities of as a moderate aromatase inhibitor, as well as possibly acting to block at receptor sites on breast tissue. This does make perfect sense when we see how the Propionate variant of Masteron was utilized exclusively within medicine to treat -dependent breast cancer in females. Through its activity as an aromatase inhibitor, it can indeed cause a reduction in water through anti- action. This is indeed the reason as to why at very low bodyfat percentages, bodybuilders experience a 'chiseling' and 3D 'ripped' look to the physique that is almost unique with Masteron. Finally, in addition to the chemical modifications, Masteron Enanthate has been affixed with the Enanthate ester on its 17-beta hydroxyl group, which serves to extend the half-life of the drug to about 7 – 10 days in the body. This is in contrast with Masteron Propionate, which is affixed with the Propionate ester and extends its half-life to that of a shorter duration: 4.5 days.

The reason as to why DHT-derivatives are so popular and useful in the world of bodybuilding and athletics is due to the fact that they are incapable of conversion (aromatization) into . DHT is not recognized as a proper substrate for the aromatase enzyme in the body, and therefore

any hormone that is derived from DHT will assume these same qualities. The only strange exception to this rule would be Anadrol-50 (Oxymetholone), which expresses heavy effects, but still does not actually aromatize. On the other hand, no effects what so ever should be experienced with the use of Masteron Enanthate at any dosage used at all. The same goes for any other compounds that are in the DHT-derivative family (with the exception of Anadrol, of course).

Advantages:

- 1, Our company is a renowned pharmaceutical manufacturer.
- 2, We can offer high purity products at competitive price in quick delivery with 99% custom pass guaranteed.
- 3, Never stop striving to offer our best service is our philosophy. We have Flexible and Untraceable payment terms.
- 4, As a leading manufacture, our products have been exported to USA, Canada, Germany, Norway, Poland, Finland, Spain, UK, France, Russia, Brazil, Mexico, Australia, Japan, Korea, Thailand, Indonesia and many other countries.

We have clients throughout the world:

1. Professional service and rich experience make customers feel at ease, adequate stock and fast delivery meet their desire.
2. Market feedback and goods feedback will be appreciated, meeting customers' requirement is our responsibility.
3. High quality, competitive price, fast delivery, first-class service gain the trust and praise from the customers.
4. Sample order are welcome.
5. We can supply sample for testing
6. We promise 100% delivered, and 100% resend if parcel is not delivered!
